REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Claims 1-11 filed on 7/28/2006 have been considered in view of the specification and the drawings of this application with respect to the references of the record. Claims 1-8 are drafted in terms of means plus function. The claims have been interpreted in view of the specification. The references of the record taken alone or in combination fail to teach or suggest storing means for storing leg tip gait data describing a time series change in a target leg tip motion, storing means for storing torso gait data describing a time-series change in a target torso motion, torso motion detection means for detecting an actual torso motion, deviation calculation means for calculating a deviation of the actual torso motion from the target torso motion, and correction means for determining a correction quantity from the calculated deviation based on a prescribed transfer function and for correcting the torso gait data stored in the storing means for storing torso gait data based on the correction quantity. Claims 9-11 are drafted in terms of a walking control method of a legged robot. The claims appear as data collection and data processing functions. However, the claims include physical elements and post solution such as a legged robot, a target leg tip motion, a target torso motion, an actual torso motion, and instructing the corrected torso gait data to a joint angles computation device of the robot to perform the method steps in practical use. Claims 1-11 are patentable distinct over the references of the record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
